WORK EXPERIENCE

Grupo MRB

Jr Software Developer | 2019 - Present

Guatemala, Guatemala

As a part of this team, i have a role to create web and mobile applications to various projects with different lines of bussiness.

- Design, develop and deploy a mobile application with flutter for a fast food delivery logistics system, that takes a role to locate all pilots and manage orders for each pilot, that helps them to get the best routes and estimated times to deliver an order using Google Maps API, and at the same time, helps administrators to get all traceability of each pilot in real time.
- Creation of API using NodeJs and express to create an ODM for a NoSQL database which validate an object before the document is created or updated.
- Develop and deploy a web application with Google Cloud Functions that takes a role to validate a perimeter of a user when that user try to mark your entry of a day job from a mobile application created with flutter.

- Implementation of an ecommerce platform for a cookie shop using an open source named "Open commerce for Mailchimp", that is a software developed with javascript technologies, my atribution of this project is develop and deploy a first API created with GraphQL, taking a rol of extend all schemas, mutations and queries required to adapt to a customer needs, as well as also develop a responsive client side using nextJs (a react Js framework) guaranteeing a better user interface & user experience.
